AI PARTNERS · LEUVEN, BELGIUM

We build the software your service business should have owne years ago.

Every company rents a pile of subscriptions and still does the real work by hand. We build the missing machine, inside your business, on your data. You own it. It keeps working if we ever disappear.

WHAT WE REPLACE
Rent → own
subscriptions become your assets

HOW FAST
Days → weeks
prototype to production

THE PROBLEM

Software got cheap to build. Service businesses still rent it.

The average service company pays for a dozen tools, owns none of them, and still runs quoting, dispatch, invoicing and follow-up by hand. The vendor keeps the asset. You keep the invoice and the busywork.

01

Rent, forever

CRM, forms, funnels, chat, schedulers, reports. Each one small. All of it monthly. None of it yours. Cancel and the workflow dies with the subscription.

02

Work stays manual

The tools collect data. People still move it around: re-typing, re-checking, chasing. Hours every week, at full salary, forever.

03

AI confusion

Every tool now says "AI" on the box. Whic
in YOUR business this quarter? Without a
is another subscription.

AI PARTNERS · COMPANY PITCH

THE ANSWER

Software in your service, not software as a service.

SOFTWARE AS A SERVICE

Rent the machine.

Every subscription is rent. The vendor keeps the asset, the data, and the upside. Your workflows live in their roadmap, priced up annually.

SOFTWARE IN A SERVICE

Own the machine.

We build into your business: your stack, your portal, your data. No new sub
return, in writing, every month. If you ever leave, it keeps working.

WHY NOW

Build cost collapsed

AI models plus modern platforms: what took a dev team and a year now takes a small crew and weeks. Custom stopped being expensive.

WHO WINS

Operators, not vendors

The wealth your software creates stays in your business instead of a vendor's ARR.

WHO WE ARE

The ones who point it

Cheap building only pays if someone ma
money first. That mapping is our product

STATS & DATA

The numbers behind the shift.

AI-ERA BUILDS

~75%

of new software companies now ship AI-native products. The build cost assumption behind "just buy SaaS" is dead.

AUTOMATION CEILING

70–90%

of repeated knowledge work can run without a human in the loop, per the ROI frameworks we use with clients.

PAYBACK, TYPICAL

Months

not years: a workflow returning 5 hours a we
loaded cost pays for its build inside one quar

OUR ENGINE, MEASURED

Every engagement reports hours returned and money found, from the client's own numbers. Same math we sell is the math we publish.

OUR MACHINE

Client portal, lead pre-qualifier, call-recap engine, 29 deployments: live on our own accounts, running our own business daily.

DOCUMENTED CASE, THE METHOD

Inspection-to-proposal: 1 hour of skilled w
by machine, priced within 6% of the humar
Partners, Provo UT.)

Numbers from your own team, not industry averages

If it does not pay back, we say so in writing

HOW THIS WORKS

Days. Weeks. Then it is yours.

STAGE 1

See it — days

The workflow that leaks the most money, working in front of you as a prototype. On your examples, not a generic demo.

STAGE 2

Live — weeks

Running on your real data, inside your stack, used by your people. Not a pilot in a corner: the actual work.

STAGE 3

Yours — one month

Production. Your code, your keys, your da
operating it with you, or your team takes
becomes rent.

1 **The Check: five days, the money map.**
Your team's hours and tools in, a ranked build list with returns out. Credited against any build.

2 **The Sprint: first machine live.**
Two weeks from yes to running software in your business.

3 **Partner: your software department.**
Monthly builds, the portal, the return in writing, every month.

4 **Department: a whole function.**
When one workflow is not enough, we staff and ship an entire departme

WHO WE ARE

Small, on purpose. The founder is on every call.
